

ESET ENDPOINT SECURITY

BETA

ESET Endpoint Security is the new line of business solutions combining the ThreatSense scanning engine and cloud-based reputation, making the solution highly effective against emerging threats.

Enhanced ESET Remote Administrator allows for easy and detailed management of endpoint security across any environment.

ESET Endpoint Security BETA VERSION

ESET Endpoint Security delivers advanced protection of endpoints with ThreatSense engine and ESET Live Grid, making the solution highly effective against emerging threats.

The solution's unique build and small system footprint, and advanced manageability of clients perfectly match any system environment ensuring a consistent level of endpoint security.

WHAT'S NEW

ESET Live Grid	Optimization of scanning based on whitelisting of "safe" files in line with the file reputation database in the cloud to limit false positives to very minimum.
Host-based Intrusion Prevention System (HIPS)	Additional protective layer of behavioral protection that allows customizing the behavior of system registry, processes, applications and files.
Update Rollback	Roll back the update of virus database and program modules to a previous version. The administrator can request rollback for a single client or for multiple clients from ESET Remote Administrator.
Improved Updates	Protect your license credentials using HTTPS and opt to defer updates for critical systems.
Presentation Mode	Makes antivirus run in silent mode, disabling all pop-up windows, including all alerts and notifications.
Modular Installation	Choose not to install selected modules or create pre-configured installation packages for different types of endpoints.
Microsoft Network Access Protection (NAP) Support	Plug-ins that allow communication within the framework of NAP, assisting in evaluation of compliance status and enforcing compliance policies of clients.
Advanced Remote Manageability	Manage protection status of clients, randomize execution of selected tasks, allow users to snooze scheduled scans, or have clients shut down once the scanning is completed.
Device Control not available in Beta release	Limit the use of external devices in the company network by whitelisting selected ones. Set up permissions per user or user group, including read-only access or read/write access.

TIME-TESTED SECURITY

Proven Antivirus and Antispyware	ESET Endpoint Security Suite protects users from emerging threats. Generic signatures and genetic technology flag unfamiliar mutations of known malware, eliminating all types of threats, including viruses, rootkits, worms and spyware.
Trademark Low System Demands	The unique build of ESET Endpoint Security with focus on small footprint has been optimized to perfectly match any system environment, ensuring fast startup and smooth performance - while delivering a consistent level of security.

System requirements: Runs on any system with Microsoft® Windows® 7, Vista, XP, 2000, NT 4.0 (SP6), Home Server, Server 2000, Server 2003, Server 2008
