

FILE SECURITY

Protect servers using reliable multilayered solution
without compromise

CYBERSECURITY
EXPERTS ON YOUR SIDE

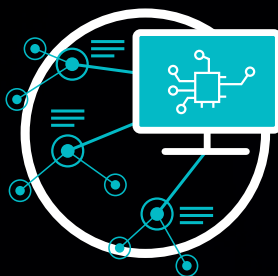

The technology

Our products and technologies stand on three pillars

ESET LIVEGRID®

Whenever a zero-day threat such as ransomware is seen, the file is sent to our cloud-based malware protection system – LiveGrid®, where the threat is detonated and behaviour is monitored. Within minutes, results of this system are provided to all endpoints globally without requiring any updates.

MACHINE LEARNING

Using the combined power of neural networks and handpicked algorithms, incoming samples are correctly labelled as clean, potentially unwanted or malicious.

HUMAN EXPERTISE

ESET's world-class security researchers share elite know-how and insight, to ensure our users benefit from optimum, round-the-clock threat intelligence.

A single layer of defence is not enough for the constantly evolving threat landscape. All ESET security products have the ability to detect malware pre-execution, during execution and post-execution. Focussing on more than one specific part of the malware lifecycle allows us to provide the highest level of protection possible.

The ESET difference

MULTILAYERED PROTECTION

ESET combines multilayered technology, machine learning and human expertise to provide our customers with the best level of protection possible. Our technology is constantly adjusting and changing to provide the best balance of detection, false positives and performance.

CROSS-PLATFORM SUPPORT

ESET File Security solutions support multiple OSes and platforms including Windows Server, Office365 OneDrive, Linux and Microsoft Azure. From a single pane of glass, all ESET solutions can be fully managed.

UNPARALLELED PERFORMANCE

A major concern for many organisations is the performance impact of their endpoint protection solution. ESET products continue to excel in the performance arena and win third-party tests that prove how lightweight our endpoints are on systems.

MULTI-PURPOSE SERVERS PROTECTION

ESET File Security provides advanced protection to all general servers, network file storage and multi-purpose servers. It pays special attention to ensuring the servers are stable and conflict-free, to keep maintenance windows and restarts at a minimum in order to not disrupt business continuity.

OneDrive

Office 365

Azure

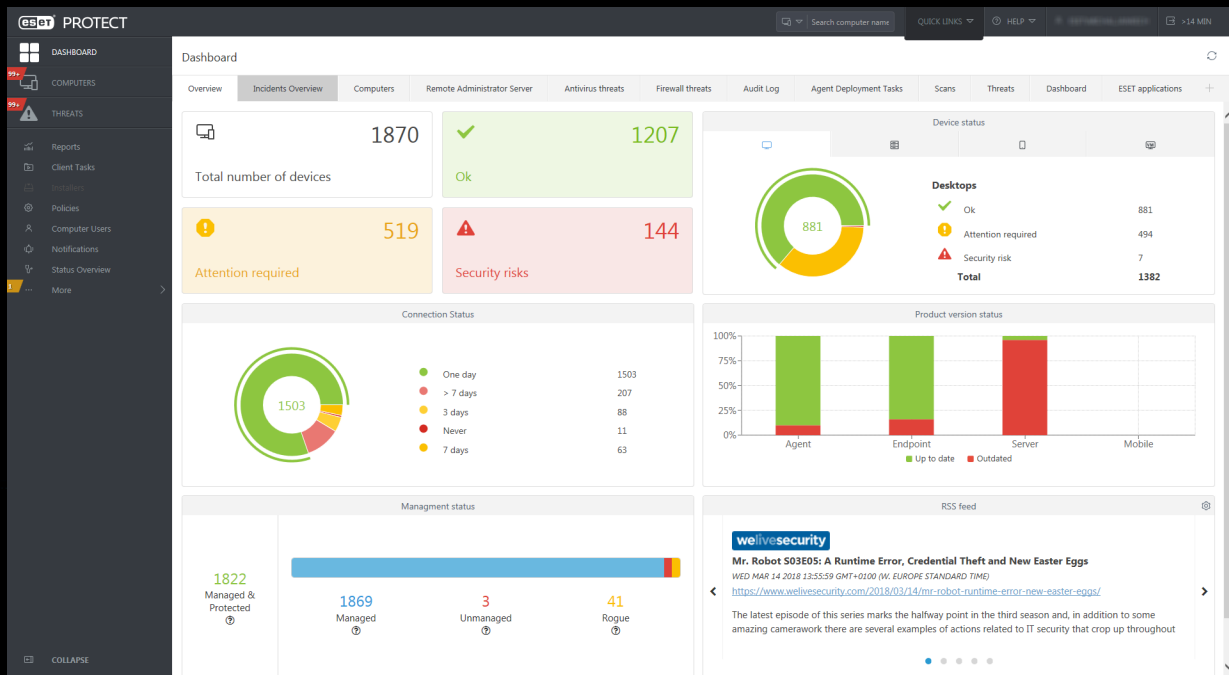

vmware®

ESET file server security solutions

ESET File Security for Microsoft Windows Server

ESET File Security for Linux

ESET File Security for Microsoft Azure

ESET PROTECT

All ESET endpoint solutions are managed from a single-pane-of-glass cloud console, ESET PROTECT, ensuring the complete overview of your network.
