

SECURITY SOLUTIONS

FOR FINANCE & BANKING

Spend more time focusing on the needs of your financial institution and clients - and less time worrying about security issues.

ESET delivers easy to implement, easy to manage solutions that help address key issues of compliance as well as IT governance frameworks. With its global presence and local partner network, ESET will help you identify, configure and install the right solutions and successfully mitigate risks. ESET solutions secure your data and keep your organization up and running so you are always ready to help your customers build a solid financial future.

Meets compliance requirements

Endpoint Security

Ensures that you comply with the current requirements for virus and malware protection. Also, by utilizing a software firewall, secures inbound/outbound communication.

ESET Secure Authentication

Adds the ability to protect access to sensitive data with two-factor-authentication (2FA). Includes the ability to protect desktop logins, VPNs, RDP, and many other applications directly from Active Directory Users and computers.

Deslock Encryption by ESET

Allows you to protect your confidential and sensitive data with a FIPS 140-2 validated encryption product. Features include full disk (FDE), file/folder, email and USB encryption.

Tailored security reports

Includes 90 pre-configured reports as well as the ability to create custom reports utilizing over 1,000 data points. This allows you to meet compliance requirements and demonstrate your commitment to client data security.

Secures your mobile workforce

ESET Secure Authentication

Allows only authorized users access to sensitive data with no extra hardware requirements. Users can utilize their mobile phones to provide the one-time password (OTP) needed to log in to whatever system is protected with 2FA.

DESlock Encryption by ESET

DESlock data encryption lets you easily manage remote users without any firewall changes. Remote Disable feature allows you to quickly and easily remove access to confidential data in case of theft or employee termination.

ESET Endpoint Security for Android

Gives admins the ability to fully manage Android devices from a central location (MDM) and adds protection against theft, viruses and malware.

ESET Mobile Device Management for IOS

Allows your admins to stay in control of your IOS devices directly from ESET Remote Administrator without any need for a dedicated mobile device management (MDM) tool.

Lowers your costs

Rip and Replace service

Easily uninstall incumbent vendors and replace with ESET solutions. No interruptions, no reboots, no user interaction required. Our 100 percent guarantee means you can quickly switch to ESET without any hesitation.

Automation by Agent

Agent running on each endpoint allows you to automate tasks such as third party software installs/uninstalls, OS updates and much more.

Virtualization Support

Shared Local Cache creates a global whitelist for your entire organization, lessening the system impact across all of your computers and virtual machines.

Free U.S.-based support

ESET support is there when you need it via chat, email and phone.
