

ESET PROTECT Advanced

What it is

ESET PROTECT Advanced includes ESET's essential security products to help you build a multilayered security portfolio with one convenient bundle. This package combines endpoint security with full disk encryption and cloud sandbox analysis for next-level protection against today's increasingly sophisticated attacks, including zero day exploits, ransomware and advanced persistent threats (APTs). For the remote workforce, it adds an extra defense against phishing and other scams, and encrypts data at rest on each user's devices. It's completely manageable through the ESET PROTECT Cloud console, improving total cost of ownership.

Why you need it

Profits from cyberattacks are estimated in the trillions annually, providing criminals with the resources and motivation to step up attacks and create more complex code designed to circumvent existing security measures. ESET PROTECT Advanced augments your award-winning endpoint protection with advanced analysis and data encryption, providing the best line of defense against the latest threats.

- **Why cloud sandbox:** Files submitted to the cloud sandbox, ESET Dynamic Threat Defense, are run through a user simulation that includes three machine learning models to fully understand their behaviors. This is vital in today's threat landscape because many files may not be malicious on their own but act as agents for other destructive malware. Your entire organization is protected as soon as the file is submitted and 90% of cases are analyzed and reported in under five minutes.

- **Why full disk encryption:** By securely encrypting the personal data records you hold, your business or organization can better protect itself in the event of a system breach. That's because such incidents are much less likely to be considered a compliance failure by regulatory authorities if data is properly encrypted.
- **Why cloud management:** ESET PROTECT Advanced provides centralized remote management via the cloud. With no additional servers to configure or hardware to maintain, ESET PROTECT Advanced lowers your total cost of ownership and further simplifies setup and overall operations.

What's included

- **Cloud-based console**
- **Endpoint protection platform**
- **Cloud sandbox**
- **Full disk encryption**

Key benefits

- Improved protection against ransomware and zero day attacks via cloud sandboxing
- Increased ease of operations and lower total cost of ownership with cloud-based management
- Advanced machine learning, deep behavioral inspection and ransomware shield enhance ESET's powerful endpoint protection
- Protects company data and helps meet regulatory compliance through advanced data encryption

Ultimate digital security for business

ESET PROTECT Entry

Multilayered business protection with one-click deployment.

ESET PROTECT Advanced

Eliminate ransomware and zero-day threats easily via cloud console.

ESET PROTECT Complete

Secured cloud applications and multilayered endpoint protection.

ESET PROTECT Enterprise

Cyber risk management and visibility into IT environment, including Endpoint Detection and Response.

ESET PROTECT Mail Plus

Secured email communication with cloud-based sandboxing.
