

SECURITY SOLUTIONS

FOR PUBLIC SECTOR
& GOVERNMENT

ENJOY SAFER TECHNOLOGY™

Protecting data and ensuring continuity of operations are essential at every level of government.

ESET technology helps you meet the need, even as budgetary restrictions require you to make do with legacy technologies, and an increasingly mobile work force pushes you to embrace new ones. ESET gives you the latest in data protection and control, with a light footprint that extends the life of legacy systems while supporting mobile platforms.

ESET Remote Administrator running on Linux

There's no longer any need to pay for CALs for every client that connects when you run ESET Remote Administrator on a Linux sever. Instead of paying for licenses, devote the money to public services.

Automation by Agent

All tasks are run by an independent agent directly on the endpoint. IT administrators' day-to-day tasks are minimized, saving time and allowing them to focus on other important or sophisticated tasks.

ESET License Administrator

You get the most out of your licenses, with no seat wasted, with clear overview of license usage in real-time. Plan and manage resources better.

Built-in Data Access Protection

No need to pay for dedicated tools for Web Control, Device Control and other Data Access Protection tools or to upgrade your hardware to cope with them.

Virtualization Support

Your VMs run faster because ESET's anti-malware solution won't slow them down. There's no need to upgrade your hardware to offset degraded VM performance when running ESET, leaving more resources for other vital services.

Mobile Devices Secured

No need for an expensive MDM tool - with ESET Remote Administrator, you can manage device security alongside desktop and server security.

Outstanding Usability

RIP & Replace

Migration to ESET is seamless. ESET Endpoint solutions now uninstall all redundant anti-malware software during their installation, and endpoints are deployed pre-set up.

User-friendly Management Console

Straightforward IT security management via a simple yet powerful web-console, which is completely intuitive to use and accessible from anywhere.

Low System Demands

Your computers don't run slower – and nor do your people. The result: no more user complaints.

Customizable GUI visibility

Users aren't distracted by anti-malware, and may not even know there is any on their endpoint, while having no GUI means even lower system demands.

Effective Reporting

You can access the reports and information you want, immediately from the system, with no need to format them later.

Choose from ESET's range of IT security products and services to secure your operation and your customers' data.

The options below can be activated individually or in combination, for improved IT security.

Endpoints Security

- Antivirus and Antispyware
- Optimized for the Virtual Environment
- Anti-Phishing
- Web Control
- Device Control
- Firewall
- Low System Demands
- RIP & Replace
- Botnet Protection
- Vulnerability Shield
- Exploit Blocker

Server Security

- **Mail Security** blocks malware, spam, spear phishing scams and unsolicited email messages from entering company network
- **File Security** enforces antimalware on your servers, to keep the OS and sensitive files free of threats.
- **SharePoint™ Server Security** protects confidential data for public-sector organizations that uses SharePoint as the storage engine.
- **Gateway Security** blocks inbound threats carried in Web and FTP traffic at the network perimeter

ESET Remote Administrator

- Web-console interface with drill-down possibilities
- Utilizes an independent remote administration agent
- ESET Remote Administrator also runs on Linux
- Possibility to deploy as Virtual Appliance
- Server/proxy architecture for network resilience
- Role-Based Management
- Secure peer communication
- Group-centric approach
- Rogue Detection Sensor

ESET Secure Authentication

- Ultra strong, super simple two-factor one-time password authentication
- Helps your operation to comply with regulations and keep client data safe
- Easy one-tap installation on mobile phone or tablet
- Prevents security breaches by validating identities
- Designed for a mobile world
- No extra hardware keeps costs low and users happy
- Flexible integration options

ESET Technology Alliance: Deslock+ Data Encryption

- Simple and powerful encryption for organizations of all sizes
- Safely encrypts hard drives, removable media, files and email
- FIPS 140-2 Validated 256 bit AES encryption for assured security
- Hybrid-cloud based management server for full remote control of endpoint encryption keys and security policy
- Support for Microsoft® Windows® 8, 8.1 including UEFI and GPT
- Centralized management

Premium Support

- Highly-trained professionals are at your disposal 365/24/7
- Save on IT-related costs and free up your IT resources to focus on clinical care provision
- Respond to security issues quickly and protect your reputation
- Get priority for your request to increase uptime

California city cites multiple security challenges before choosing ESET

The City of San Luis Obispo had difficulty with all of the following prior to purchasing ESET security solutions:

- protecting customer data, organizational data and intellectual property;
- balancing employee productivity and strong protection;
- protecting virtual environments;
- meeting regulatory compliance standards such as PCI, SOX, HIPAA, and GLBA;
- and implementing a mobile or BYOD policy.

Steve Schmidt, IT Manager, City of San Luis Obispo
